Team 47: Did it for the Cookies

Problem Statement

A scattered database has made it hard for the organization to track

The organization wishes to optimize its performance by visualizing its data, hence aiding in the efficient management of resources

The organization need a strong database to improve the efficiency.

Tech Stack Applied

1. Front End Using HTML, CSS, JS
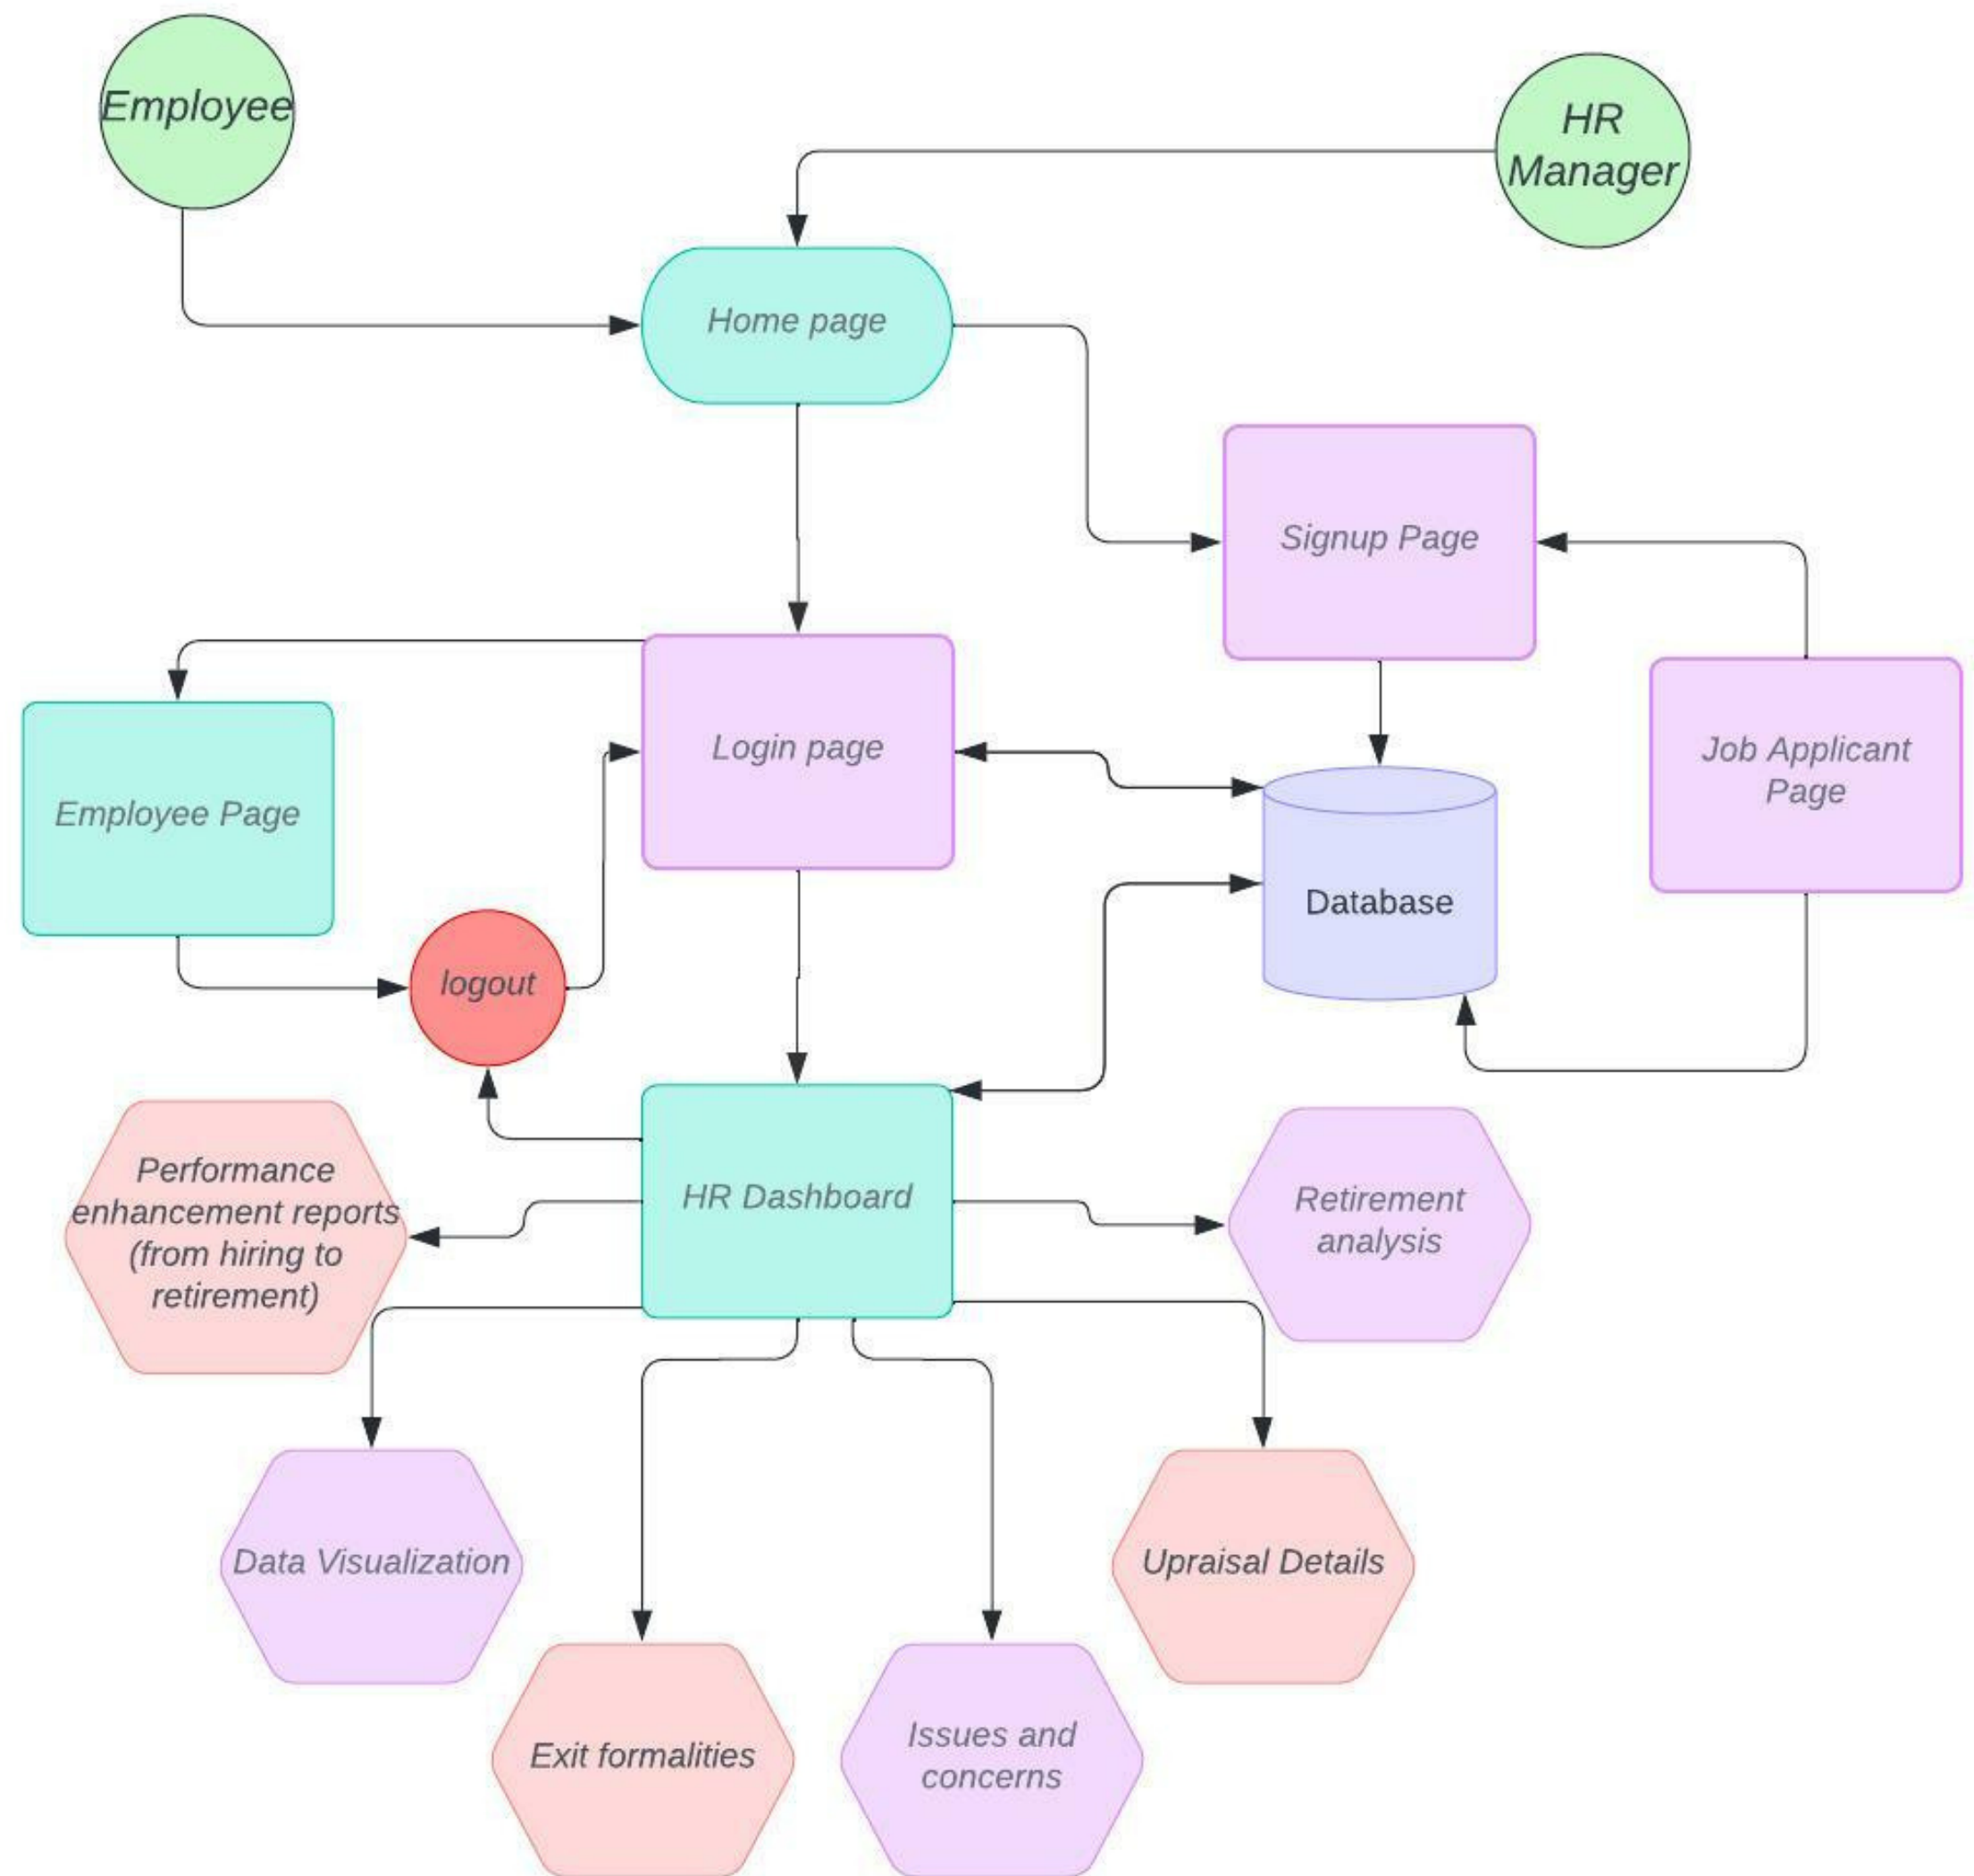

2. Axios Used as Middleware

3. Node JS and Express JS for Backend

4. MongoDB used as Database

Workflow

Future Scope

- In future NLP can be used for the reviewing the Resumes.
- Admin Roles for Funds can be added.
- Employee Dashboard can be added.
- Auto Mailing can also be implemented to make the hiring process easier and more streamlined
- OTP Verification can be added using API's.
- Analysis of days taken off and their reasons can be done.
- Using Power BI we can extrapolate crucial data through analytics.
